

Medical Test Document - Hypertension

Introduction

Hypertension is a chronic medical condition characterized by elevated blood pressure. It is a major risk factor for cardiovascular disease, stroke, and kidney failure.

Symptoms

Common symptoms may include headaches, dizziness, fatigue, blurred vision, and chest pain. Many patients remain asymptomatic for years.

Diagnosis

Diagnosis is based on repeated blood pressure measurements. A systolic pressure of 140 mmHg or greater may indicate hypertension depending on current clinical guidelines.

Treatment

Treatment includes lifestyle modifications such as diet, exercise, and weight management. Medications may include ACE inhibitors, beta blockers, or diuretics.

Prevention

Preventive measures include reducing salt intake, maintaining a healthy weight, regular physical activity, and avoiding tobacco use.
